

WINMGS

How to Use

Admin Publish, Live Sync and Integration Setup

Deployment target: <https://sports.winmgs.org/> | Hostinger PHP build | Updated: 26 May 2026

This guide explains how to publish website changes, verify near-real-time updates, set download links and configure optional external services. WINMGS uses virtual entertainment coins only; it does not support cash wagering or cash withdrawal.

1. Admin Publish and Live Sync

The public site uses a Hostinger-friendly live revision check. Every saved admin change creates a new website revision. Open website and player pages check the lightweight version endpoint approximately every 2 seconds and reload their data only when a revision changes.

Action	Admin location	Visible result
Design, logo, banner, HTML/CSS	Website Studio > Publish Design	Theme/content updates within about 2 seconds.
Games and game source	Game Catalog	Lobby and player catalog refresh.
Slides, ads, pages, matches	Content panels	Related public sections refresh.
QR/payment/download links	Payment or Platform panels	Player/download screens refresh.

Quick Publish Test

1. Open the public website in one browser tab and Admin in another tab.
2. In Admin, change a banner text, slide, game name or download link and press its publish/save button.
3. Keep the public tab open. The saved change should appear in about 2 seconds without a hard refresh.
4. For design changes, Admin displays LIVE VERIFIED after confirming the public API returned the saved CMS design.

Technical note: true WebSocket server push needs a continuously running socket service supported by hosting. This PHP package instead uses low-cost revision checks suited to ordinary Hostinger PHP hosting.

2. Website and Download Links

Purpose	Published URL
Main website	https://sports.winmgs.org/
Admin panel	https://sports.winmgs.org/admin
Cricket rooms	https://sports.winmgs.org/cricket
Casino rooms	https://sports.winmgs.org/casino

Purpose	Published URL
Android APK	https://sports.winmgs.org/downloads/WINMGS-Android-v1.1.0.apk
iPhone/iPad web install	https://sports.winmgs.org/app-download#ios-install
Windows web install	https://sports.winmgs.org/app-download#window-install
This PDF guide	https://sports.winmgs.org/downloads/WINMGS-How-to-Use-Guide.pdf

Security: never publish the admin password in a website page or downloadable PDF. Change the initial admin password from Admin Profile immediately after deployment.

3. Login and Redirect Setup

Google and Facebook buttons work only after valid provider credentials are saved in Admin. Register these exact production redirect URIs in the provider consoles:

Provider	Production redirect URI
Google OAuth	https://sports.winmgs.org/api/auth/oauth/google/callback
Facebook Login	https://sports.winmgs.org/api/auth/oauth/facebook/callback

Official provider documentation: <https://developers.google.com/identity/protocols/oauth2/web-server>
<https://developers.facebook.com/docs/facebook-login/>

OTP Verification

- Admin > Integrations accepts the SMS OTP endpoint, API token, sender ID and approved message template.
- Use a lawful SMS provider account and satisfy local sender/template registration requirements.
- Registration and password-reset OTP cannot send real SMS until valid provider credentials are configured.

4. Live Sports and Telegram Setup

Feature	Required setup	Reference link
Cricket data feed	Provider plus API key; delay and limits apply	https://cricketdata.org/how-to-use-cricket-data-api.aspx
Telegram proof alert	Bot token and destination chat ID	https://core.telegram.org/bots/api
WINMGS contact	Public support/profile link	https://t.me/winmgs007

- Use only licensed/allowed sports feeds; do not scrape or reuse another website's private APIs.
- Telegram proof delivery sends submitted images only to the admin-configured destination when enabled.
- Keep API keys and bot tokens in Admin storage, never in page HTML or this public document.

5. Replacing Games Safely

Source option	Use it for	Limit
WINMGS Built-in Engine	Local virtual mini-games	Virtual rewards use published settings.
Authorised HTTPS HTML5 Embed	A licensed external game URL	Embed does not automatically issue rewards.

1. Open Admin > Game Catalog and locate the room.
2. Edit its photo/name/details when keeping the same game identity.
3. Choose Replace Game to use a built-in engine or authorised HTTPS embed URL.
4. Set LIVE only after checking licensing, mobile compatibility and iframe permission.

6. Go-Live Checklist

- Upload the complete PHP ZIP contents to Hostinger and preserve hidden .htaccess and .user.ini files.
- Confirm the storage folder is writable; Admin must show publishing storage as writable.
- Change the initial admin password before sharing the website.
- Test one CMS publish, one game edit, one QR/link update and this PDF download on mobile and desktop.
- Configure OTP, OAuth, sports feed and Telegram credentials only through Admin and verify each integration.
- Keep the legal notice visible: virtual coins have no monetary value and cannot be withdrawn as cash.
